(984) 301-2528 | anborda18@gmail.com | Raleigh, NC | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Frontend-focused developer with a B.S. in Computer Science who loves turning ideas into clean, working products. Comfortable owning a project end to end — from UI design to deployment — with a growing full-stack and mobile skill set.

EDUCATION

B.S. Computer Science, Software Engineering Concentration | Minor in Mathematics

University of North Carolina at Charlotte | Charlotte, NC | *Graduated December 2025*

Coursework in Digital Media, Culture, and Technology

Royal Holloway, University of London | Surrey, UK | *Sep 2021 – Nov 2022*

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, HTML/CSS

Frameworks & Libraries: React, Next.js, Tailwind CSS, Node.js, Express.js, Prisma

Databases: PostgreSQL, Firebase/Firestore

Tools & Platforms: Git/GitHub, Vercel, Figma, Postman, VS Code, Linux

Spoken Languages: English (Native), Spanish (Fluent)

PROJECTS

Applied Here (In Progress) • [applied-here.vercel.app](#) — *Next.js, React, Tailwind CSS*

- Building a web app where users can create a personal portal to track all their job applications in one place
- Actively adding new features and refining the UI as the project evolves

New Day, New Song • [new-day-new-song.vercel.app](#) — *Next.js, Tailwind CSS, Genius API, Resend*

- Built a web app that serves up a different song every day, using a date-hash algorithm against the Genius API so the pick is unique and consistent with no database needed
- Designed a custom pastel UI from scratch — color palette, typography, layout — to give the app its own visual identity
- Added a feedback form powered by Resend so users can send thoughts directly from the site

Guess the Song – Web App • [guess-the-song-webapp.vercel.app](#) — *Next.js, TypeScript, Firebase, Spotify Web API*

- Built a music guessing game where players log in with Spotify and try to name songs from short previews
- Handled the trickier parts myself — Spotify OAuth, token refresh, and playback edge cases — to keep the experience smooth

Guess the Song – Android App — *Java, Android SDK, Firebase, Spotify Web API*

- Built the original Android version of the song-guessing game, pulling tracks straight from a user's Spotify library
- Set up Firebase authentication and worked through Spotify's OAuth and App Remote logic to get playback running reliably

Game Night API — *Node.js, Express.js, Prisma ORM, PostgreSQL*

- Contributed to a collaborative REST API for planning and managing board game events
- Built out the event module end to end — full CRUD operations plus the ability for users to join events and see who else is attending

PROFESSIONAL EXPERIENCE

Legal Assistant | **Mitchell & Suhr PLLC** | Raleigh, NC (Hybrid) *Feb 2023 – Present*

- Designed an updated website for the firm in coordination with FindLaw, reworking the UI/UX to modernize the firm's online presence
- Built guides and streamlined workflows — quick sets, shortcuts, settings tweaks — to help other legal assistants use hardware and software (printers, Microsoft 365) more efficiently
- Communicate directly with clients to walk them through their legal process and keep them updated on case status
- Manage client documentation and case workflows, including work permit and asylum application packets

Paralegal Intern | **Krompecher Law Firm** | Raleigh, NC *May 2021 – Aug 2021*

- Assisted with motor vehicle accident claim documentation and case preparation
- Drafted pleadings and motions, and coordinated with medical providers to gather supporting records
